#### COUNTY BOROUGH OF BOURNEMOUTH.

### ANNUAL REPORT

OF THE

### Medical Officer of Health

For the year 1920.

Health Department,
Borough Offices,
Bournemouth.
May, 1921.

# TO THE CHAIRMAN AND MEMBERS OF THE HEALTH COMMITTEE, COUNTY BOROUGH OF BOURNEMOUTH.

Gentlemen,

I beg to present the Annual Report on the health of the County Borough during 1920. The Ministry of Health have specified the information they require concerning the work of the Health Authority, and where possible this has been summarised or given in tables so that the size of the report has been reduced as much as possible.

No epidemic of serious disease has occurred in Bournemouth during the year, and the zymotic death rate has again been one of the lowest in the country.

The information given in the report dealing with Maternity and Child Welfare, shows that the

work has been very greatly increased during 1920. The attendances of mothers and children at the four Infant Care Centres, which numbered 10.391 in 1919, increased to 16,151 in 1920; and the visits of the Health Visitors to mothers and infants increased from 4,994 in 1919 to 7,534 in 1920. order to cope with this increase of the work it was necessary to utilise some of the time usually given by the Health Visitors to Tuberculosis work and to the Infectious Disease control work in the County Borough. While this was necessary as a temporary expedient, it is not advisable to deprive these two latter departments of the full attention necessary for their efficient working, and application was therefore made, but unsuccessfully, by the Council for the sanction of the Minister of Health to the more frequent opening of the Infant Care Centres and the appointment of an additional Health Visitor.

During the year the Bournemouth Health and Mothers' Aid Association, which has done very valuable work for some years in Bournemouth, found that they were unable to continue the work of the Dav Nurseries, and although the Boscombe Day Nursery was maintained from October, 1920, to January, 1921, by the Local Health Authority, it was eventually decided to close it. Deprived of this part of their work, and as there appeared to be no prospect of continued financial support, it was considered advisable that the Association should be wound up, but all the valuable assistance given at the Infant Care Centres by the Voluntary. Workers has been continued and these ladies have now formed the Bournemouth Infant Welfare Voluntary Association.

During the year there has been an increase in all departments of the Tuberculesis work. In accordance with the policy of the Health Authority special attention has been paid to patients in the advanced stage of the disease, and they have been offered a greater amount of Institution accommodation, partly because they require special care and nursing, and partly because it is recognised that these advanced cases constitute a great part of the problem of the disease, for they are probably the main source of infection to others living in the house. The earlier cases of Tuberculosis cannot be regarded as a source of tuberculosis infection.

During the year 17 children were sent to the Harpenden Children's Sanatorium as compared with 8 during the year 1919.

With regard to the problem of Tuberculosis in general, the present economic condition makes it necessary to review briefly the development of the work in the future. Sanatorium treatment for a few months in early cases is now proved to be inadequate in the great majority of cases, and although a few years ago much was hoped from the institution of Farm Colonies, the practical difficulties of their institution and maintenance were great beyond expectation. Moreover, the patient who, after a few months treatment in a Sanatorium, recovers from an early attack of Tuberculosis, chooses the alternative of returning to work rather than of continuing Institution and segregation treatment in any form.

During the past two years, the question of Village Settlements for Tuberculosis patients has been widely discussed. In these communities it is proposed to settle industrial consumptives for whom completely arrested disease cannot be established or whose home conditions and occupations render difficult the maintenance of the renewed health. The patients' families would live with them in the Village Settlements. This expedient appears at first sight to be an excellent one, if it

were practical, but it is questionable whether consumptives and their families would consent to move into such a Village Settlement, and moreover, if the expedient really dealt with all the suit able cases of Tuberculosis the capital expenditure required would be enormous. I believe that the solution of the Tuberculosis problem will be found in the provision of healthy house conditions, for it is an established fact that Tuberculosis spreads among people susceptible to the disease only in crowded and unhygienic surroundings. In the past, three factors have combined seriously to prevent the elimination of the disease. The advanced Tuberculous patient usually lives at home with his family under crowded and unhealthy conditions, and the people with whom he is living, being of the same family, probably share with the patient the lessened resistance to the disease which determines its occurrence among them.

I am,

Your obedient servant,

A. D. EDWARDS,

Medical Officer of Health.

#### SUMMARY OF STATISTICS

and general information relating to the County Borough of Bournemouth.

- 1. Area of the County Borough. 6643 acres.
- 2. Geological Information. Bagshot Sands Series. Subsoil—Silicious Sand.
- 3. Population. Census of March, 1911: 78,674.

  Civil Population, 1920: 85,919.

  Density of Population: No. of persons per acre, 12.98.

  No. of persons per house, 4.9.
- 4. Birth Rate. 16.34 per 1,000 in 1920.
- 5. Infantile Mortality. 45.39 per 1,000 births.
- 6. Death Rate. 11.10 per 1,000.
- 7. Phthisis Death Rate. 1.02 per 1,000.
- 8. Influenza Death Rate. 16 per 1,000.
- 9. Number of Cases of Infectious Diseases per 1,000 of the Population. Scarlet Fever 1.29, Diphtheria 91, Enteric Fever 02, Variola .0, Erysipelas 19, Cerebro-spinal Meningitis 08.
- 10. Number of Inhabited Houses. (1911) 15,000, (1920) 17,250.
- 11. Rateable Value. (1920) £806,298.
- 12. Rates. Poor and General District Rates (1920) 9s. in the £.
- 13. Water Supply. Constant service from deep artesian wells at Wimborne, situate about 11 miles from Bournemouth.
- 14. Sewage Disposal by water carriage, outfalls into the sea at Double Dykes, Fisherman's Walk, Boscombe Chine, Bournemouth and Alum Chine. There are separate storm-water outfalls also discharging into the sea.
- 15. Price of Gas. 4s. 9d. per 1,000 cubic feet.
  - Price of Water. 43 per cent. under £20 rental, 5 per cent. over £20 rental.
  - Price of Electric Light. 6d. per unit plus 33\frac{1}{3} per cent., 2\frac{1}{2}d. per unit for power plus 33\frac{1}{3} per cent.
- 16. Rainfall. 32.07 ins.
- 17. Bright Sunshine. 1564 hours,

The birth and death rates, etc., in this report have again to be calculated on the civil population figures supplied by the Registrar General.

These figures are:—

For the Birth-rate ... 86,288 For the Death-rate ... 85,919

My estimate of the population of Bournemouth in 1920 is 93,000. The area of the County Borough is 6,643 acres.

<sup>\*</sup> Estimated on 1915 population figure.

<sup>†</sup> Estimated on new civil population figures supplied by Regr.-Gen.

#### MATERNITY AND CHILD WELFARE.

1. Midwives Act. Inspection. Twenty-five midwives notified their intention to practice in Bournemouth during 1920. Of these, 14 are permenently resident in the town, the remaining 11 practised temporarily. Of these 25 midwives, 24 were trained and 1 was untrained.

The Inspector of Midwives paid 117 visits to midwives; and 169 records were received concerning the sending for medical assistance by midwives. In 18 of the cases for which medical assistance was obtained by the midwives, the doctor's fee was paid by the Health Authority, the whole of the fee being recovered in one case, and a part of the fee in three other cases.

Of the births that occurred in Bournemouth in 1920, in 50 per cent. midwives were engaged without a doctor, and in 24.7 of these cases the midwife sent for medical aid.

2. The Birth rate for the year was 16.34. The birth rates for previous years are:—

1913 1914 1915 1911 1912 1916 1917 1918 1919 15.5 17.5 14.8 15.6 13.4 14.0 16.0 12.412.4 118

The *infantile mortality* for Bournemouth for the year 1920 was 45.39. Analysis of this figure shows that during the four quarters of the year the rates were 29, 65, 38 and 38 respectively.

The following table gives the rates for the past ten years:—

1910 1911 1912 1913 1914 1915 1916 1917 1918 1919 65.0 66.0 70.994.169.6 83.7 57.2 87.1

The number of births during the year was 1,410 and the total number of infant deaths was 64, of which 5 were transferred to Bournemouth. Five deaths occurring in Bournemouth were transferred to other areas. Of the 64 infant deaths, 16 were certified as being due to premature birth, which caused more deaths than any other one condition.

Scheme of Work. The work in connection with the Infant Care and Maternity Department is carried out under the direction of the Medical Officer of Health by the Council's Health Visitors. Voluntary Workers have rendered valuable assistance at the four Centres and have also undertaken some of the continuation visits in the homes.

Maternity and Infant Care Centres. Four of one afternoon these centres are open on every week, in each district. one dresses given to the mothers by are of the Health Visitors and a clinic is held where infants and mothers and expectant mothers are seen by a medical practitioner. Voluntary workers assist in all departments of the Centres and also undertake the educational work, carrying on classes for mothers for the cutting out of garments, cookery and first-aid. Addresses to expectant mothers are given by midwives practising in the district.

Hospital Treatment. The Health Authority have provided by contract with the Local General Hospital Maternity accommodation and treatment for difficult and complicated cases of pregnancy, cases in which the house is overcrowded or otherwise unsuitable for labour, and complications of the newly born child. Accommodation is also provided for cases of Opthalmia Neonatorum, Puerperal Fever, and also for infants who, although under medical attention at the Infant Clinics, are not thriving.

Provision of Milk and Dinners. Under the Maternity and Child Welfare Act, 1918, milk was supplied free or blow cost to 340 mothers and children during the year, the average number receiving milk in this way on any one day being 109,

The expenditure during the year amounted to £671 0s. 6d. as compared with £291 0s. 0d. during 1919. Dinners were also supplied to 9 mothers and children during 1920 at a cost of £13, as compared with 3 mothers supplied with dinners during 1919 at a cost of £2 11s. 0d.

cases of this condition were notified. Of these, three were admitted to the Borough Isolation Hospital, six into the General Hospital and three into Nursing Homes. The infants were kept under observation, and it was possible to obtain information concerning 13 of these cases after an interval of some months. In twelve cases, the fact was verified that there was no permanent injury to the eyes; and one case is still under treatment. The notifications to the Medical Officer of Health of Ophthalmia or threatened Ophthalmia have been made without delay, and prompt measures have been taken so that permanent injury to the eyes of the infants has been avoided.

				64

In view of the fact that some of the deaths were transferred, it is not possible to obtain complete figures in order to work out a comparative death rate of breast fed and artificially fed children; but by estimating the number of breast fed children among the 1,410 births in 1920 on the basis of a percentage of 76.33, figures are obtained which show that of 1,076 breast fed children 19 died, a percentage of 1.7, and of the 334 infants who were artificially or partly artificially fed, 15 died, a percentage of 4.4. Natural feeding gives to the infant a far greater chance of life and health.

#### INFECTIOUS DISEASE.

While no death occurred from Scarlet Fever or Measles during the year, it was necessary to deal with a small outbreak of Diphtheria which, however, was prevented from spreading from the locality of its occurrence. The following table shows the Annual Death Rate per 1,000 Civilian Population in the 96 Large Towns during 1920, compared with that of Bournemouth.

	Enteric Fever.	Small- pox.	Measles.	Scarlet Fever.	Whooping Cough.	Diphtheria
96 Great Towns, including London	0.01	0.00	0.22	0.04	0.14	0.16
Bournemouth	0.00	0.00	0.00	0.00	0.00	0.06

#### TUBERCULOSIS.

The following is the information required by the Ministry of Health concerning the Tuberculosis work in Bournemouth.

(a) Medical Staff. The administrative work and the domiciliary visits and control are carried out by the Medical Officer of Health. The medical attendance on patients at the Tuberculosis Dispen-

sary is carried out by the Resident Medical Officer of the Royal National Sanatorium, Bournemouth, who acts as Clinical Tuberculosis Officer during three afternoons a week, this being at present the amount of time which he gives to the work of the Local Health Authority. The Tuberculosis Nurse attends the Dispensary and visits the patients in their homes.

Apart from the domiciliary work, and the Tuberculosis Dispensary which is open on two afternoons a week for adults and one afternoon a week for children, the Local Authority have made arrangements for institution treatment as follows:

- (1) Sixteen beds for early cases of Tuberculosis of the lungs in adult patients. Usually these patients are sent to the Royal National Sanatorium, Bournemouth, but occasionally patients are sent to the Royal National Hospital for Consumption and Diseases of the Chest, Ventnor, I. of W., The Mount Vernon Hospital for Consumption and Diseases of the Chest, Northwood, Middlesex, and The Royal Sea-bathing Hospital, Margate.
- (2a) The option of 10 beds for patients suffering from advanced Tuberculosis of the lungs in the Firs Home, Bournemouth.
- (2b) Six beds set apart for the same class of patient at the Borough Isolation Hospital.
- (3) Children suffering from incipient Phthisis, or who, during their attendance at the Tuberculosis Dispensary, are considered to be in the pre-tubercular stage are sent to the Children's Sanatorium of the National Children's Home and Orphanage, Harpenden, Herts.

Cases of surgical Tuberculosis are admitted into the Royal Victoria and West Hants Hospital,

Bournemouth, but the provision for these cases is not made by the Local Health Authority.

With regard to the extent to which the scheme has already been developed, the above arrangments have all been fully utilised during the past few years with the exception of the accommodation at the Borough Isolation Hospital which was provided for the first time in April, 1919. The amount of work under each heading has gradually increased.

With reference to the adequacy or otherwise of the provision made, it is most desirable that a larger number of the advanced cases of tuberculosis of the lungs should be provided with institution accommodation, but it is difficult to persuade these patients to avail themselves of the facilities provided.

The homes of patients attending the Dispensary are visited, and house-contacts are encouraged to attend the Dispensary if they are not in good Children attending the Elementary health. who are house-contacts of tubercular Schools patients are given special attention in the School The Tuberculosis Aid and After Medical Service. Care Committee, which was formed in 1917, is a Voluntary Association with representatives from the Health Authority, Insurance Committee, Board Guardians, Medical Profession, Friendly Societies and other Councils. Although its efforts to obtain a Farm Colony for Bournemouth patients were not successful, the Association has been active in the after care of tuberculosis patients by personal work among the patients relative to their occupation and mode of living and their welfare in general, and by obtaining the co-operation of employers of labour and other existing agencies. A certain amount of home visiting is carried on by Voluntary Workers under the direction of the Medical Officer of Health.

PUBLIC HEALTH (TUBERCULOSIS) REGULATIONS, 1912.

#### VENEREAL DISEASES.

The following is the information required by the Ministry of Health concerning the Council's Scheme for the prevention and treatment of these diseases:

The Venereal Diseases Clinic is open on two afternoons a week at the Boscombe Branch of the Royal Victoria and West Hants Hospital. The work is undertaken for the Council by the Hospital Authority who appoint the staff including a specialist Medical Officer. The same Clinic serves the neighbouring districts in Hampshire and Dorset, and the charge to the Bournemouth Health Authority is in proportion to the number of attendances of Bournemouth patients at the Clinic and the number of "in patient days" of Bournemouth patients.

Laboratory investigations are carried out as follows: Examinations of specimens for the Wassermann Test are carried out at the Hants County Laboratory, Winchester, and all other specimens are examined at the laboratory attached to the Venereal Diseases Clinic at the Boscombe Branch. Salvarsan or approved substitutes are supplied to general practitioners who are qualified to receive supplies.

With regard to the extent to which the scheme has already been developed, the work was started in April, 1917, and the number of patients treated at the Clinic increased until 1919. The figures for 1920 show a slight decrease over those of 1919.

## TREATMENT AND PREVENTION OF VENEREAL DISEASE.

The following tables give statistics concerning the Municipal Clinic and the provision of bacteriological facilities for the diagnosis of Venereal Diseases.

#### Table A. Municipal Clinic.

I remain, Gentlemen,

Your obedient Servant,

F. J. TANNER,

Borough Bacteriologist.

#### COUNTY BOROUGH OF BOURNEMOUTH.

SANITARY INSPECTOR'S DEPARTMENT.

May, 1921.

# TO THE MAYOR AND TOWN COUNCIL OF THE COUNTY BOROUGH OF BOURNEMOUTH.

Mr. Mayor and Gentlemen,

I have the honour to submit for your consideration the Annual Report of work carried out by this Department for the year ending 31st December, 1920.

The routine duties of the Department have been well maintained throughout the year.

The following special subjects have been considered by your Sanitary Committee and reported to the Council during the year:—

(1) Pig-keeping (including Renewal of Permits).

(2) Street Trading.

(3) Abatement of certain Nuisances.

(4) Rat Campaigns (Nos. 2, 3 and 4).

(5) Housing.

(6) Food and Drugs Act.

(7) Factory and Workshops Act:

(a) Notice of Occupation.

(b) Contravention under Sect. 1.(c) Contravention under Sect. 5.

(d) Means of Escape in case of Fire.

(8) Right-of-way, Malmesbury Park Road.

(9) Staff and Administration.

(10) West Howe Hospital Garden Produce.

(11) Domestic Servants' Registries.

(12) Unsound Meat, Cold Stores, Boscombe.

(13) Ladies' Lavatory (Additional accommodation), Triangle.

(14) Bournemouth Theatre and Cinemas—Sanitary Conditions.

(15) Borough Ambulances.

(16) Sheds, Outbuildings and Caravans used as Dwellinghouses.

(17) Increase of Rent and Mortgage Interest

(Restriction) Act, 1920.

(18) Sanitary Inspector's Conference, Margate.

(19) Wart Diseases in Potatoes.

#### RE CINEMAS AND PICTURE PALACES.

The special arrangements made under your Authority for the regular disinfecting of these premises by the Public Disinfector once a fortnight has been continued during the year.

The charge to cover his time and materials used has been defrayed by the Proprietors.

General Inspections have also been made of the premises as to the Sanitary Conveniences, Lighting and Ventilation.

# THE FACTORY AND WORKSHOPS ACT, 1901-1907.

The total number of workshops and work-places now registered in the Borough is 795, an increase of 84 on last year's total.

During the year, 128 new workshops have been registered, 168 workrooms have been measured and 245 cards, re cubic space, etc., have been supplied to the occupiers.

In all cases where nuisances have been found, notices have been given to the owner or occupier

of the premises to remedy the defects, and it is very satisfactory to be able to report that in every case the nuisance has been abated without legal action.

During the year 1,245 inspections, including Bakehouses and Restaurants, have been made, and notices have been served.

The Occupation Cards have been revised, and are brought up to date.

The following is the list of Workshops on the Register at the end of the year, classified according to trade, and showing the number of rooms occupied:—

Trade.	Premises Registered	Rosms Occupied
Bakehouses	74	82
Kitchens of Restaurants, &c.	44	44
Dressmakers and Milliners	158	214

Metal Workers, &c	34	48
Cycle Builders and Motor Work	rs 42	55
Miscellaneous	71	118
	<del></del> 795	1068

#### BAKEHOUSES.

Of the 74 Bakehouses occupied in the Borough, one is occupied as underground bakehouse, and the remainder are on, or above, the ground level.

The underground bakehouse is certified by your Authority to be suitable (as regards light, ventilation, construction, etc.) to be used as a bakehouse.

During the year seven additional bakehouses have been entered on the Register and eight taken off.

The whole of the bakehouses in the Borough have been cleansed or limewashed twice during the year, in accordance with the requirements of the Act.

Two hundred and twenty-six visits have been made of these premises during the year.

#### KITCHENS OF RESTAURANTS, ETC.

These premises, 44 in number, have been inspected, and special attention has been given to the cleanliness of the larders, tables and cooking utensils, and these have been found to be satisfactory.

#### HOMEWORK.

During the year 63 lists containing the addresses of 176 "Outworkers" have been received.

Twenty-five of these addresses were outside the Borough, and the usual particulars were sent to the Authorities of the District in which the work was done.

Eleven addresses were received from outside Authorities.

One hundred and fifty-one visits were made to Outworkers' premises, and in no instance was it found necessary to serve a notice for the abatement of nuisance.

Two employers of Outworkers failed to send in their lists of Outworkers at the specified time. Letters of warning were sent, and the requirements were subsequently complied with.

## REGISTRIES FOR FEMALE AND DOMESTIC SERVANTS.

The number of premises on the Register at the end of the year was 18.

Surprise visits have been made from time to time to the premises for the purpose of enforcing the provisions of the By-Laws relating thereto.

#### SHOPS ACT, 1912.

During the year, 2,962 visits have been made to shops in the Borough under this Act. In 58 cases the Exemption Notice under the second schedule, 121 cases the Assistant Weekly Half-Holiday Notice under Sect. 1, and 49 cases the Young Persons Notice under Section 2 were not found to be affixed, as required by the Act.

In every case a warning was sufficient, the requirements being subsequently dealt with.

Fifty-nine Warning Notices ree "Sale of Celluloid Articles" were delivered.

Special inspections with regard to the sale of non-exempted goods on the half-day of closing have been made.

#### STREET TRADING.

Special inspections have been made on Sundays, and also on week-day evenings. Fifty-eight boys were found working in contravention of the By-Laws and letters of Warning were sent to the parents.

Under the new By-Laws with reference to the Employment of Children and Street Trading, which takes effect from the 1st January, 1921, all

Licence Badges issued under your Health Authority have been withdrawn, and the sum deposited has been refunded in each case.

EMPLOYMENT IN SHOPS, ETC Forty-six premises have been visited with regard to the employment of children. Eight boys were found to be working in contravention of the By-Laws. In all instances, warnings by letter have been sent to the Parents and Employers.

EMPLOYMENT IN PLACES OF ENTER-TAINMENT. On receipt of licences, the place of entertainment has been visited and the conditions of the licence enforced. Special evening inspections were made by the Inspector as required.

#### SMOKE NUISANCE.

During the year, general inspections of the Borough have been made of special premises such as bakehouses, laundries, factories, etc., for the detection of nuisances arising from black smoke, and, where found necessary, observations of 60 minutes' duration were made.

Letters of Warning were sent and these had the desired effect.

# SUMMARY OF SHOPS ON REGISTER. 31st December, 1920.

### DAIRIES, COWSHEDS AND MILKSHOPS ORDERS.

Four hundred and sixty-eight inspections have been made of cowsheds, dairies and milk purveyors in the Borough, and the Regulations relating to cleanliness, limewashing and general sanitation have been enforced.

Nine registrations have been made during the year for the sale of milk from milk shops.

The half-yearly limewashing of premises has in every instance been carried out after notice by your Inspector. There are only five cowsheds in the Borough.

## GENERAL INSPECTION OF FOOD SUPPLIES.

During the year, 4,890 visits were made to shops in the Borough for the inspection of Meat and Food Supplies, and in respect to the cleanliness of the premises and stores.

Periodical and regular inspections of the Meat Supplies form an important part of the duties of the Food Inspector. The tables appended preve how necessary these inspections are.

By arrangement with the retail traders, early morning inspections of meat are made before the meat is "weighed in" by the butchers in all cases where the carcases have been slaughtered outside the Borough.

Members of the Master Butchers' Association have rendered a great assistance to this Department in calling attention to diseased or doubtful carcases. It is now the regular custom for the butcher to obtain the Inspector's opinion as to the carcase being fit for food before he completes the purchase, should there be any doubt as to the meat being diseased or unsound.

The following quantities of meat and other foods were destroyed as diseased or unsound and unfit for consumption:—

Butchers' Me	at (diseas	sed)	•••	***	19,404 lbs.
Butchers' Me			• • •	•••	$19,085\frac{1}{2}$ ,,
Fish	•••	•••	• • •	• • •	$4,241\frac{1}{2}$ ,,
Fruit	• • •	•••	• • •	• • •	6,332,

			· ·			4,890	"

#### SLAUGHTERHOUSES.

There are six slaughterhouses in the Borough. During the year 706 inspections have been made, and the Regulations as to periodical limewashing, cleansing, etc., carried out.

It is satisfactory to report that in our Borough the Master Butchers insist on their employees using proper and suitable instruments for slaughtering, and in taking all reasonable precautions to secure the humane slaughtering of animals, Special attention has been given to the inspection of pigs. Strict inspections clearly prove that it is essential, both for reasons of the Public Health and the pig trade generally, that all carcases should be carefully examined before being offered for sale.

#### STABLES AND MEWS.

During the summer months, systematic inspections were made of the above premises with the view of minimising the nuisance and danger of the common house-fly.

The By-Laws as to the removal of the manure once a week have been strictly enforced.

#### INSPECTION OF SCHOOLS.

An inspection of the private schools in the Borough has been made with the view of detecting overcrowding of class rooms and ascertaining the sanitary condition of the premises generally.

The premises have been measured up and the number of scholars allotted to each as per standard approved by your Authority.

The total number of Schools in the Borough is 62, comprising 264 classrooms. The number of scholars in attendance averages 2,300.

Also, the sanitary arrangements of the larger Private Schools have been examined, and the drain age tested at the end of each term, and reports as to repairs, cleansing, etc., made to the Principals.

This periodical examination has proved to be a precautionary measure where the number of boarders necessitate large households being maintained.

The sanitary conveniences of the public Elementary Schools have also been systematically attended to by the Drain-Testers who are responsible for the daily cleansing and disinfection of all the fittings, etc. The conveniences are thus maintained scrupulously clean, and the scholars are induced to make proper use of the same.

# VARIOUS ORDERS OF THE BOARD OF AGRICULTURE AND FISHERIES.

The Wart Disease in Potatoes Order, the American Gooseberry Mildew (Fruit) Order, and Silver Leaf Order 1919 have been enforced as required, and the literature supplied by the Board has been freely circulated to all growers and traders in the Borough.

Posters relating to the first Order were posted up on all the principal allotments and the growers are now cognisant of the signs and nature of the disease.

## THE FERTILISERS AND FEEDING STUFFS ACT.

It has not been found necessary to take any action under this Order during the year, and no applications or complaints have been received.

#### RAG AND FLOCK ACT REGULATIONS.

Inspections have been made of the premises where flock is used for manufacture of bedding, upholstering, etc.

# DISTRICT SANITARY INSPECTORS' SUMMARY OF WORKS.

#### COMMON LODGING HOUSES.

There are only two registered common lodging-houses in the Borough.

The premises in both instances have been kept in clean and satisfactory condition, and no case of infectious disease has been notified.

The general supervision of these premises is under the control of the Police.

#### FRIED FISH SHOPS.

There are now 14 of these shops in the Borough, and from time to time inspections have been made as to the cleanliness of the premises, soundness of fish supplies, and ingredients used in the trade.

#### INFECTIOUS DISEASE.

During the year 218 Reports, as per undermentioned table have been made to the Medical Officer of Health as to Infectious cases notified.

The drainage and sanitary arrangements of the premises have been examined and tested, and 18 preliminary notices have been served on the owners and occupiers for abatement of nuisances ascertained.

These notices have, in all cases, been complied with satisfactorily.

#### REPORTS ON INFECTIOUS CASES.

(Include Observation Cases.)

#### BATHING STATION.

There has been a gradual decrease in the number of cases of Scabies, but the temporary Bathing Station is still required to be opened twice a week as a rule.

The method adopted, of disinfecting the patients' clothing and insisting on the bedclothes being disinfected at each bath, has proved most effectual, even in the neglected and long-standing cases.

Verminous cases requiring baths have also decreased during the past year.

The total number of baths for the year 1920 was 170.

#### CESSPOOL DRAINAGE.

#### WINTON AND MOORDOWN DISTRICT.

During the past year the following works have been executed in connection with the emptying of cesspools in the above-named districts:—

No. of Cesspools e	mptied		187
No. of loads of sew	age removed	• • •	473
No. of Cesspools	condemned	and	
filled in		• • •	2

There are now only 23 houses with cesspool drainage and these are situated principally in the lower parts of Moordown and in roads that cannot at present be sewered, owing to existing level of sewers.

The cesspool cart (Merryweather's Patent Vacuum Cart) was at work 97 days during the year.

#### POKESDOWN DISTRICT.

There are now 15 cesspools in the district of Tuckton and Wick which require periodical attention:—

No.	of Cesspools emptied		24
No.	of loads of sewage removed	• • •	90
	of cesspools filled in	• • •	0

#### PIGGERIES.

#### WINTON.

Periodical inspections have been made of the piggeries in the district, most of which are situated in the outlying parts of the district at Moordown, and are kept in conformity with the By-Laws and Regulations.

No.	of	Pigge	eries				• • •	161
				at	last	inspec	etion	
	(ap	prox.	)			• • •		758

Twenty-nine new piggeries have been erected during the year. Five complaints have been received and nuisances abated.

Of the 161 piggeries in this district, 32 are kept in accordance with the By-Laws and 129 under the temporary Regulations of January, 1917.

#### Pokesdown.

No.	of Pig	geries	• • •	• • •		41
			last ins	spectio	n	189

One complaint was received and one nuisance abated.

Of the 41 piggeries in this district, 19 are kept in accordance with the By-Laws of the Borough, and the other 22 are constructed under the temporary Regulations of 1917.

Two new pigsties with impervious floors, etc., were constructed in accordance with Notices served under the Borough Regulations.

Note.—The question of the licences granted under the temporary Regulations, referred to above, was recently considered by the Health Committee, and it was decided (1) to grant no further permits under these regulations, (2) to renew all existing permits to the 31st March, 1923 (at that date to finally terminate), and (3) that all future applications should be dealt with under the By-Laws.

#### PUBLIC MORTUARY.

From January 1st to December 31st, 1920, the total number of Inquests was 79 and Post Mortems 57.

The total cost as to working expenses for the year 1920, as far as this Department is concerned, is as follows:—

	£	S.	α.
1. Proportion of Attendants' wages			
for cleansing	41	0	5
2. Attendance at Inquests and Post			
Mortems	12	0	$6\frac{1}{2}$
3. Gas from December, 1919, to			
December, 1920, including			
upkeep of burners			
4. Disinfectants, Soap, Laundry,			
	2	17	$3\frac{1}{2}$

Note.—Item 2 does not include proportion of Superintendent's salary.

#### SALE OF FOOD AND DRUGS ACTS, 1875-1907.

Inspector: Mr. W. D. CARTER.

During the year 1920, 398 samples of Food and Drugs were obtained, of which number 278 samples were purchased formally or "taken" in accordance with the provisions of the Acts; 120 samples were purchased informally and submitted as "Test" samples to the Analyst.

#### Of the 398 samples,

312 or 78.40 per cent, were reported genuine.

43 or 10.80 per cent. were poor or doubtful quality.

43 or 10.80 per cent. adulterated, or in some way deficient.

	 Adultered,	Poor or doubtful,
Official	 7.6	9.7
Unofficial	 18.3	13.3

Tables showing the various articles analysed during the year, with the result of the analysis, will be found in the Public Analyst's Report, Tables II. and III.

#### MILK.

One hundred and fifty-seven samples of Milk were officially purchased or taken and submitted to the Public Analyst, who reported adversely upon seventeen of the samples. Of the adulterated samples, five were deficient in milk fat and twelve contained added water, etc.

Forty-eight samples were submitted to the "Gerber Test" by your Inspector; the whole of the samples were taken from consignments of milk in course of delivery to dairymen in the Town. Six of these samples were of poor or doubtful quality and eleven adulterated.

For the detection of the poorer supplies, and subsequent administration regarding them, these examinations are of increasing utility.

#### BUTTER.

Fourteen samples of butter were purchased; none of these were adulterated.

#### DRUGS AND PRESCRIPTIONS.

Thirty samples of Drugs, including Cream of Tartar and Epsom Salts, were sent for Analysis.

The Public Analyst reported adversely upon the following informal sample:—

1 Sample of Cream of Tartar.

#### LEGAL PROCEEDINGS.

During the year six summonses were taken out and convictions followed in three cases.

In these cases the proceedings were instituted in respect of samples reported against by the Public Analyst.

# Legal proceedings instituted in respect of samples reported against by the Public Analyst:—

#### RAT CAMPAIGNS.

During the year under review, three organised campaigns (Nos. 2, 3 and 4) have been held, and the particulars and results are as follows:—

		CA			
		1.	2.	3.	TOTAL.
1 2	No. of Rats caught Applications from	244	246	308	<b>79</b> 8
	Householders	33	68	57	158
3	No. of Baits applied	1,000	1,550	2,000	4,550

#### INCOME AND EXPENDITURE.

CAMPAIGN No. 2.

Expenditure £12 8s. 0d. Income £8 18s. 6d.

CAMPAIGN No. 3.

Expenditure £14 3s. 6d. Income £10 13s. 6d.

CAMPAIGN No. 4.

Expenditure £24 15s. 10d. Income £20 2s. 0d.

#### GENERAL REMARKS.

- 1. All the rats caught were examined.
- 2. All were found to be clean, healthy rats with the exception of three affected with mange.
  - 3. No black rats were found.

The Secretaries of the Gas and Water Company and Electric Light Company, Ltd., were communicated with as to the openings made and left in walls where gas and water mains and electric light cables pass through, pointing out that such openings provided a means of ingress for rats. Attention to these points in future was promised.

- 5. The Parks, Chines, Cliffs and Pleasure Gardens were systematically hunted with dogs and ferrets during each campaign.
- 6. The greatest number of rats were caught under fowl-houses, pig-stys, etc.

7. The premises connected with the catering trades have received special attention during the year, and particularly where food is stored for human consumption. The most effectual and permanent remedy is to rat-proof such premises by cement-rendering the floors and foundations, and by proper protection of doors, basement windows and ventilators. The owners of the properties so dealt with have expressed their satisfaction at the results obtained.

Although the expense was heavy, the saving of foodstuffs have warranted the outlay, as it has been possible to maintain the buildings free from rats.

In several of the large old shops it has been found practically impossible to rat-proof the whole building, but isolated rooms have been so dealt with where the food-stores can be specially kept when not exposed for sale.

In the larger hotels and boarding establishments, the larders and food-stores have been rendered rat-proof.

Vermin-proofing of premises is the best remedy for protection against the apathy of neghbours in dealing with the rat question.

8. In my Report on the 4th Rat Campaign (November, 1920) I expressed the opinion that "the rat infestation is now down to its normal level," and I was able to confirm this statement in a later Report.

# INCREASE OF RENT AND MORTGAGE INTEREST (RESTRICTION) ACT, 1920.

Under Section 2 of the above Act, the tenant is entitled to make application to the Sanitary Authority of the District for a Certificate, should

he or she consider the house not to be in all respects reasonably fit for human habitation, or otherwise not in a reasonable state of repair. In the event of a Certificate being granted, the tenant is permitted to deduct the fee of 1s., payable in respect of his or her application, from any subsequent payment of rent, and can also apply to the Court, on the expiration of three months from the date of the Notice of the Increased Rent, for the enforcement of the repairs.

The action taken by this Department, during the period under review, is as follows:—

1. No. of Formal Applications	32
2. No. of Certificates issued	23
3. No. of cases where no Certificates	
were issued	9
4. No. of Visits and enquiries by the	
Staff	83

In about thirty instances, terms have been mutually agreed upon by the landlord and the tenant without resorting to formal action.

The fee of 1s., payable in respect of every Formal Application, has been remitted in each case.

I beg to record my best thanks for the consideration your Health Committee has invariably given to the various questions affecting this Department, and for the support given for the enforcement of the Sanitary Administration of the Borough.

Also to the Inspectors and Staff for their loyal and ready support in the routine work, and at special times of urgency.

The passing of our esteemed colleague—John Lewis—has left a blank in the Department, but his

memory is still green, and his faithful labours for so many years still follow him in the records of the office.

I remain, Mr. Mayor and Gentlemen,
Your Obedient Servant,
WM. GEO. COOPER.
Chief Sanitary Inspector.

#### COUNTY BOROUGH OF BOURNEMOUTH.

#### ANNUAL REPORT

OF THE

## Public Analyst

For the Year ending 31st December, 1920.

# TO THE MAYOR AND TOWN COUNCIL, BOURNEMOUTH.

GENTLEMEN,

I have the honour to present for your consideration my report on the samples of Food and Drugs sent to me for analysis during the year 1920.

The total number of samples was 398, of which 278 were taken under the usual formal provisions of the Food and Drugs Acts, and the remaining 120 were purchased informally by the Inspector or his Agents.

The number of adulterated samples was 43, or 10.8 per cent.

The poor or doubtful samples numbered 43, or 10.8 per cent.

Twenty-one of the adulterated samples were official and 22 unofficial, being 7.54 per cent. and 18,33 per cent. respectively, whilst 27 (or 9.71 per cent.) of the official samples and 16 (or 13.33 per cent.) of the unofficial samples were of poor or doubtful quality.

Table I. shows the comparison of these results with those of the previous ten years:—

#### Table I.

80	Lemon Squash	Phosporic acid 0.74 per cent.  Water approximately 60 per cent.	•			
83	Lime Juice Cordial	Phosphate acid 0.32 per cent.  Water approximately 40 per cent.				
86	Pork Sausages	Boric acid 0.94 per cent.	Not more than 0.25 per cent. of Boric acid allowed.			
89	Poak Sausages	Boric acid 0.28 per cent.	Not more than 0.25 per cent. of Boric acid allowed.			
91	Pork Sausages	Boric acid 0.36 per cent.	Not more than 0.25 per cent. of Boric acid allowed.			
94		Added water 1.8 per cent.				
	Milk	Added water 11.2 per cent.				
	Milk	Added water 2.3 per cent.				
97	Milk	Added water 2.1 per cene.				
99	Milk	Added water 2.3 per cent.				
120	Cream of Tartar	Lead 50 parts per million	Mixture allowed 20 parts per million.			

#### MILK.

Excluding the fourteen adulterated samples the average composition of the remaining 143 samples was:—Fat, 3.63 per cent.; non-fatty solids, 9.11 per cent.

The averages for the four quarters of the year (excluding the adulterated samples) have been:—

				Samples	Fat %	S.N.F. %
1st Qu	arter	• • •	•••	40	3.51	9.11
2nd	,,		• • •	39	3.66	9.00
3rd	,,	•••	• • •	20	3.69	9.07
$4 ext{th}$	,,		• • •	44	3.71	$9 \cdot 22$

In no sample could any preservative be detected.

I have noticed a tendency to increased percentage of non-fatty solids in other districts also.

#### CREAM.

The use of Boric Acid as a preservative in no fewer than 26.4 per cent. of the samples examined indicate the prevalence of a most unjustifiable practice which should be rigorously dealt with. Clotted Cream also should not contain Boric Acid unless clearly declared on the label.

#### SELF-RAISING FLOUR.

The results this year have been exceptionally good, only one sample containing an excess of Calcium Sulphate notwithstanding the fact that "Phosphate Powder" is coming more and more into use in place of Tartaric Acid or Cream of Tartar. This proves the truth of my statement made in last year's report and on many other occasions that "reasonably pure Acid Phosphate is quite easily obtained commercially."

#### GREEN PEAS.

Sample No. 51 was exceptionally bad, containing Copper equivalent to no less than  $3\frac{1}{2}$  grains of Copper Sulphate in each pound. There is no excuse for the sale of such an article, the utmost allowable being only 2 grains per pound, and then only if declared in clear type on the label.

#### LEMON SQUASH, LIME JUICE CORDIAL.

A practice has been growing recently whereby Phosphoric Acid is used either wholly or in part for giving acidity to these articles and so saving the more expensive Citric Acid, which is the natural Acid of Lemon and Lime fruits. It is satisfactory to note that the Surrey C.C. has successfully taken action in such cases, and it is hoped that other authorities will follow this lead, otherwise the country will soon be saddled with another series of frauds whereby cheap artificial products are sold under the names of Lime Juice Cordial, Lemon Squash, Raspberry Vinegar, etc.

I am,

Mr. Mayor and Gentlemen, Your obedient Servant, R. A. CRIPPS.
